Engineering in Missions Internship (EI)

January 2020

Dates: 8-29

Program Overview

The January EI Program is designed to give current engineering students an overview of applied engineering in the mission field. Rio Missions has been operating in Panama for over 10 years and is dedicated to equipping and encouraging the emerging church in Panama. We do this through various methods including a strong focus on meeting practical needs of church communities in poor areas. One of the most pertinent needs in the majority of our partner communities is access. We have partnered with the Messiah College Collaboratory for the last 5 years to bring safe and well built bridges to various communities. *Students may apply with Messiah College for up to 3 internship credits.

Students in the program can expect to:

- Visit and assess previous bridge projects
- Learn first hand about the global need for engineering in the mission field
- Participate in other missions activities with Rio
- Gather data for future engineering projects in Panama
- Develop relationships with local believers
- Live missionally and Grow spiritually in an adventurous setting
- Tour and study the Panama Canal
